Using the Teaching Console

Open the teaching console door and check out the four components all of which you must power up and select for your presentation.

Press the power button on the left side of the audio amplifier to turn on room audio. Later, you may need to adjust volume with the two knobs on the right side of the amplifier.

Now press the power button on the Sony DVD/VCR for use with VHS and DVD presentations. There is a DVD and a VHS button on the front of the Sony for selecting the type of input you will be using.

Press the power button on the Kramer controller. The Kramer controls all audio and video inputs in the console and must be turned on for the audio and video devices to display.

Press the power button on the PC and allow time for it to begin its boot up cycle. Once it has been powered up, you will be able to log in to the network.

To change the input shown on the data projector use the Kramer control pad located on top of the console. The PC button will show the PC, the VHS button will show the VCR, and the DVD button shows the DVD. The Camera button is used for ITV events only.

Locate the Dell remote control, usually found on the top shelf by the keyboard. Point it at the data projector hanging from the ceiling and press the power button on the top right. Give it a moment for the projector lamp to warm up.

To use the document cam you must first press the power button on its right side, and wait for the power light to turn green.
