Projecting the DVD/VCR Player

Slide out the top shelf of the console. Locate the data projector remote control.

Point the remote at the data projector hanging from the ceiling in the middle of your room. Press the power button on the remote control. Wait a few seconds for projector to warm up.

The audio amplifier is usually on the bottom shelf of your teaching console. Press the power button ON.

Locate your DVD/VCR. Press the power button ON.

Put your VHS Tape or DVD into the appropriate slot. Some models will start playing immediately. On other models you must select the type of media & then press the play button.

On top of the data transfer switch is the sound selector. Make sure the VCR button is pressed in.

Point the remote control again at the data projector on the ceiling. Press the button marked video.

On the lowered projection screen, you should see the Your projected VHS tape image from the VCR.

If the image is not being projected, check the VHS tape to make sure the tape has been rewound. Also, make certain that the VCR play button is pressed.
