

# How to Use Natural Reader Free Edition for Windows

1. Go to: <http://www.naturalreaders.com> and click on free download

2. Select "Run" after clicking on the Download Link

3. After downloading, Natural Reader will Automatically Start:

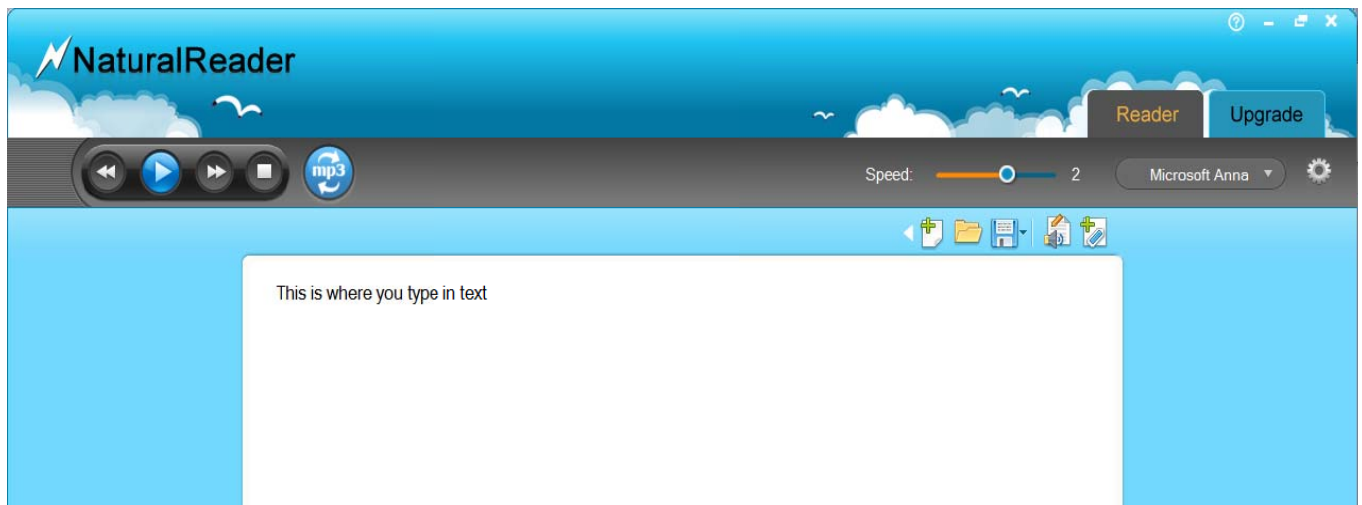

#### 4. Your next step depends on what type of text you want to read:

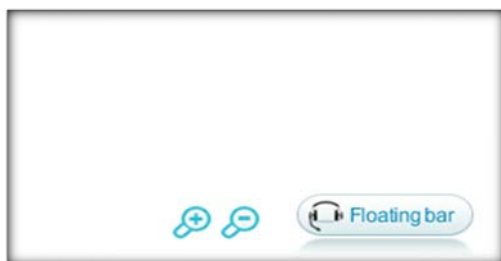

- If you have a text document ending in “.txt” or “.rtf”
  - Go to “File” in the upper left corner and click “open”
  - Look for your file on your computer or network and open it

#### 5. To type text directly into Natural Reader:

- Highlight the welcome text in the box and delete it. You can now type your text into the box.

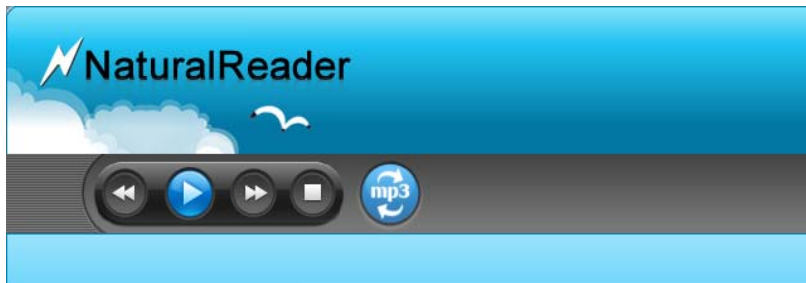

#### 6. Using the Floating Bar for Word Documents, Web Pages and PDFs:

- In Natural Reader, click the “Floating Bar” button in the bottom right. This collapses Natural Reader into a floating toolbar that you can use with other programs.
- On the computer, open the document you want to read (e.g., if it’s a Word document, open it in Word. If it’s a webpage, open your browser and navigate to the site, etc.)
- Select the portion of the document that you want to read, so that it’s highlighted.
- In the Natural Reader Floating Bar, click the play button.

**7. Now you can hear your text read out loud by the voice you chose in your target language:**

- Click on the “Play” button on the left.
- Click on the “Pause” or “Stop” button at any time.
- Click “Resume” after pausing if you want to keep listening to it.

**8. Adjusting the Speed**

- You can also adjust the speaking speed by changing the “Speed”. Make sure you stop the audio first, before you change any settings (speed, voice, etc.).
