

Canvas Alternative Document Formats

Canvas automatically creates Alternative Document Formats for Canvas files to allow students with different learning preferences or accommodations to access documents in a format that better suits their individual needs. This feature works for Word and pdf files.

Students will see a **Download arrow** next to the file to be viewed (picture 1). Click on the download arrow to see other options for that document (picture 2).

As the student chooses **Alternative Formats**, another screen will appear giving further options (picture 3). The student clicks on the best format for their needs, then clicks download.
